

BLACK MATERNAL HEALTH STATS

Black womxn have historically bore the burden of gynecological research, yet today they benefit least from medical advances & experience discrimination in health practices. This trend doesn't correlate with socioeconomic status, access to healthcare or education level.

by Alex Kimball Williams, 2020

1 MATERNAL MORTALITY

Black parents with uteruses are 2-3 times more likely to die from pregnancy-related causes than their white counterparts. Black parents over the age of 30 are 4-5 times more likely.

2 PREVENTABILITY

Contrary to popular understanding, most pregnancy-related deaths are preventable.

3 INCREASED OCCURRENCE

Pregnancy-related deaths are on the rise. More Black parents are lost today from pregnancy-related causes than in decades past.

4 CHRONIC DISEASES

Chronic diseases are more prevalent and less well controlled in Black womxn, due to a multitude of factors including environmental racism, provider bias, metabolic differences, & more.
